EwalletCashier

AUTOMATED PAYMENT CASHIER

The fully automated payment cashier

E-wallets and payment apps in. Crypto out. Every transaction handled end to end, 24/7, with no human in the loop.

WHAT IT IS

A fully automated payment cashier

eWallet Cashier lets businesses accept deposits with zero human involvement. Customers pay with everyday e-wallets and apps (PayPal, Venmo, Apple Pay, Zelle, Cash App) or send crypto directly (Bitcoin, Ethereum, USDT, USDC, TRX). The cashier converts, confirms, and settles every transaction automatically, around the clock.

Runs 24/7

Always on, with no downtime and no waiting.

No human in the loop

Every deposit and payout is handled end to end.

Fresh addresses

A unique wallet address per transaction, never reused.

Fraud detection built in

Fake screenshots and duplicates are blocked automatically.

The core idea: everyday e-wallets and payment apps go in, clean crypto settlement comes out.

THE PROBLEM

Manual deposits leak revenue

No deposits without a human

Operators normally cannot take deposits unless someone is in the loop. That bottleneck quietly costs revenue.

Addresses go stale

Wallet addresses expire and get reused, so customers hit dead ends and abandon their deposits.

3am payment requests

Agents answer late or not at all, and every missed request is money left on the table.

No fraud infrastructure

Without detection, fake screenshots and duplicate submissions slip through unnoticed.

With eWallet Cashier

- Always-on automated deposits
- A fresh address on every transaction
- Auto-confirm in about 30 seconds, no agent
- Enterprise fraud detection on every payment

HOW IT WORKS

From setup to settled, automatically

1

Operator setup

Create an account and go live in about 2 minutes.

2

Unique customer ID

Each customer is linked to their own dedicated ID.

3

Pick amount and network

Customer selects $200 to $5,000 and a preferred network.

4

Fresh address generated

A unique wallet address is created instantly, never reused.

5

Send and auto-confirm

Upload a screenshot; the system confirms with no human action.

Five steps, fully automated. The only human action is the customer paying and uploading a screenshot.

WHO IT'S FOR

Built for high-risk payments

Deep specialization in the verticals traditional processors restrict, alongside low-risk businesses that simply want deposits handled automatically.

- iGaming
- Sportsbooks
- Online Casinos
- Sweepstakes Casinos
- Poker
- Prediction Markets
- Sweepstakes
- Peptides

Plus 50+ additional verticals. Fintech, forex, e-commerce, travel, nutraceuticals, dating, precious metals, telemedicine, and many more, all integrated directly into your existing systems.

WHITE LABEL

Run it as your own. Work both sides.

Full white label lets you operate under your own brand, using your own wallet addresses on both the deposit and the payout side. That control opens a direct arbitrage play.

Your brand, your wallets

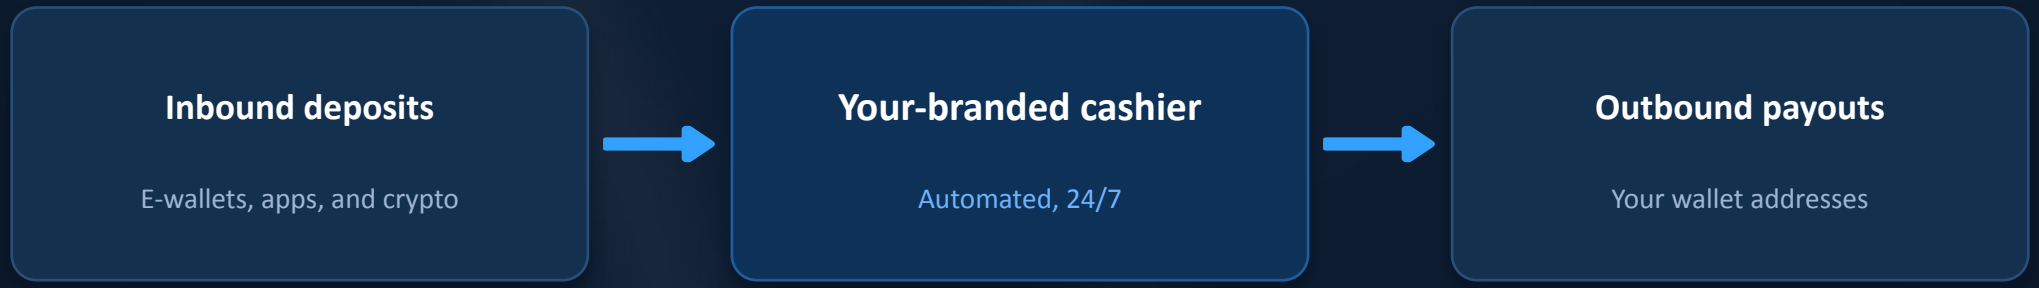
Run the cashier under your own identity on both sides.

Both sides of the flow

Collect inbound deposits and process outbound payouts.

Offset platform cost

Clients consistently cover cost by working the spread.



Collect inbound, process outbound, control the full transaction flow.

WHY IT MATTERS

Always a fresh address waiting

> *Imagine if every purchase on Amazon required you to email customer support to get the payment details. It would kill the business. eWallet Cashier eliminates that problem entirely, there's always a fresh address waiting, 24 hours a day.*

24/7	$500–$5,000	30+	2 min
Availability, no downtime	Per transaction range	Developers building full time	From setup to going live
